

SIM SP Z O.O.

tradycyjnie nowocześni

SIM engineering company is a designer and manufacturer of professional digital voice recorders designed to record phone conversations held on PSTN, IP, and GSM networks as well as radio communications together with complete signal analysis. The devices have been designed in such a way that they can work as stand-alone units as well as in dedicated, corporate, multi-modular systems. The outstanding reliability of our solutions guarantee the integrity of the recordings and the quality of the recordings is verified by independent phonoscopy experts identifying the speakers, making it possible for our devices to meet strict security requirements, saving and storing of data along with their proven accuracy. SIM is also a producer of DOMATIQ. Automation system DOMATIQ has been developed as a universal tool for providing the householder with comfort as well as monitoring and optimising the costs of energy and utility consumption. Our products offer virtually unlimited possibilities for managing electrical appliances, heating systems, air conditioning, ventilation, and lighting.

Produkty i usługi: Offered products/services: Complex solutions within the telecommunications and IT domains, we are a manufacturer of tactical solutions for call logging on almost all types of lines (analogue, digital, IP), we are a constructor
